WHY WOLCOTT WASTEWATER?

WE HAVE A UNIQUE OPPORTUNITY...

A significant amount of funding is secured for a community wastewater system for the Village. Timing is crucial as we will lose funding if we do not take advantage now. The feasibility and affordability of this special situation is before us.

"Investing in water, sewer and stormwater initiatives is key to revitalizing communities and spurring economic growth."
—Governor Phil Scott

WHAT?

A Septic Tank and Effluent Pump (STEP) system collects wastewater from each serviced unit, where solids settle in a tank and remaining wastewater is sent to the a pump station. A pressurized pipe sends collected wastewater from the pump station to the "public leach field," a.k.a. disposal field, up the hill to fields at the elementary school.

Disposal field includes a subsurface drip disposal lines that release the effluent into the soil. Where microbes further recycle the nutrients and makes them available for plants, while also replenishing our ground water tables.

WE NEED YOUR SUPPORT

There will be two votes on June 11, 2024.

- A school district vote to site the dispersal system at the school's athletic fields.
- A vote to fund the difference in capital costs after all grants have been awarded.

WHY?

- Maintaining or developing new homes and businesses will grow the Grand List.
  - Has potential to increase property values.
  - New students will help maintain the Wolcott school.
- Will help protect water quality.
- New community spaces
- Flood resilience and reliability
- Cost-effectiveness
- Welcoming environment for folks visiting from the rail trail would boost our local economy.
- Aide environmental health and sustainability

WE WANT TO HEAR FROM YOU
